DELPHI

Seating Products

Seating Excellence at Work

Like the historical Delphi town in Greece where people came to rever the wise oracle, the armchair should attracts people of similar wisdom and authority.

Appearance

Indulge in Delphi's luxurious materials, namely full leather upholstery with stylish contrast stitching, and polished aluminium members.

Comfort

The deep cosy wrap-around backrest shape with plush cushioning, cossets you and gives a sense of security and tranquility.

Flexibility

The high-back swivel chair combines a headrest adjustable for height by friction. The chrome-plated finish of the headrest metal components provides a classy touch.

Delphi product family consists of 4 models to meet different needs and budgets in the same office.

Backrest

For the standard basic line, only the seat, backrest and armrest panels are upholstered in fabric or synthetic-covering. For optional premium line (available in leather upholstery only), the rear of the back-shell is wrapped in leather in addition to leather upholstery. Leather and synthetic-covering upholstery will come with thicker, contrast-color thread stitching.

Seat

Seat padding is moulded of polyurethane foam whereas the backrest, headrest and armrest employ dual-layer, dual density foams. Seat, backrest and armrest shells are moulded in black recyclable polypropylene.

Base

A 70cm diameter five-point base(V) in black polyamide(nylon) comes as standard. A diecast aluminium version of same design(VP) in polished finish is optional. All are equipped with twin-wheel hooded castors in black polyamide(nylon).

Mechanism

All swivel chair models employ a four-point synchronised recline mechanism featuring gas seat height control, recline-tension adjustment, and stepless recline lock. The mechanism main structure is diecast aluminium while control levers and knobs are moulded in polypropylene, all in black textured finish.

Backbone

The backbone supports are diecast aluminium in a smooth polished finish.
