

FILA

Seating Products

Seating Excellence at Work

Fila is a multi-purpose chair suited for hotel, convention, banquet and event seating. It is ideal for setting up large numbers of seats and quickly storing them away after the event.

Polypropylene Shells

Offer a hard wearing and soil-proof surface for outdoor and heavy duty events. The seat shell colour can be selected independently from the back colour to create unique colourways. Muted uniform colours can be specified if contrast colour-blocking is not to your taste. A drainage hole clear rain water on the seat.

Padded Textile

Exudes warmth and coziness, as well as lending some organic texture. With some clever shaping, the seat pad is thicker and plusher than its slim appearance suggests. Seat and back pads can be removed and replaced without special skills or tools (screws and velcro fastening).

Legs are designed to interlock with each other in seconds without any tools or extra brackets. Overlapping legs appear as a single leg to reduce visual clutter.

Unique to Fila are its Ready-Link legs which make their ganging a simple and swift process.

Main Shell

Injection moulded shell in white or charcoal (100% recyclable).

Optional Seat Shell

Injection-molded polypropylene in choice of 5 standard colours (100% recyclable).

Optional Upholstery

Upholstered over polyurethane cut foam (recyclable into carpet padding, wadding etc).

'Ready Link' Leg Base

Durable single piece glass fibre filled polyamide(Nylon) in charcoal colour. Leg design provides ganging & stacking function.
